FULL STACK WEB DEVELOPER - SOFTWARE ENGINEER

I'm a Software Engineer and Fullstack Web Developer specializing in React (MERN Stack), Python, Django, Javascript, Express.js, Node and more. I come from a background primarily rooted in the music industry and the cultivation of DIY art scenes. My credits in the music industry from soundtracking & sync licensing include major video game franchises like *Grand Theft Auto*, *FIFA* and *Fallout 3*. Within my first two weeks studying Web Development, I'd already completed five browser-based games, within the first few months I had four full stack web applications all built in a diverse array of tech stacks. From starting my own businesses to working at Fortune 500 companies, my background & expertise make me a one-of-a-kind candidate who marries creativity and productivity with a personable signature.

TECHNICAL & INTERPERSONAL SKILLS

Languages: Python, JavaScript, SQL, Mongo, JSON, Typescript, EJS, DTL, HTML, CSS & more

Libraries and Frameworks: React, Express, Django, Mongoose, JQuery, Bootstrap, Material UI, Materialize

Databases & other: PostgreSQL, MongoDB, RESTful Routing and APIs, JSON, AWS, S3, Axios

Interpersonal skills: curation, project management, leadership, management, public speaking, creativity

TECHNICAL PROJECTS

[SMOKE](#) - [GitHub](#) | [App](#) - MongoDB | Express.js | Node | React | CSS

A social network I designed for creatives to share Intellectual Property

- Entire Frontend built using React and CSS using react-router-dom features such as useRef, useParams & useLink
- Framework / Backend architecture is engineered using Express.js implementing several data Models
- Achieved MVP 6 days before deadline and added edit functionality to comments and more advanced like buttons

[CLEARANCE](#) - [GitHub](#) | [App](#) - Python | Django | PostgreSQL | Materialize

User-Based online hub for confirmed UAP/UFO Sightings

- Used Django to design fully interactive database for confirmed UAP/UFO Sightings composed entirely with Python
- Implemented high resolution photo and video storage using AWS S3
- Group project where I was Git Manager for the dev team, handled all merges, migrations, conflicts and code sync
- Completed 4 days before deadline then added increased resolution functionality for photos and videos as well as a comment thread for specific cases

[SLICE](#) - [GitHub](#) | [App](#) - Express.js | Node | MongoDB | Mongoose | Javascript | CSS | OAuth

Fully interactive social-media based Power Rankings site for NYC Pizzerias

- Entire framework built using Express.js & Node and utilized MongoDB for Database
- User Interaction and Outside Authorization achieved using OAuth through Google's People API
- Completed 6 days before deadline

[Boomtown PONG Edition](#) - [GitHub](#) | [App](#) - HTML | CSS | Javascript

The Pong Edition of BOOMTOWN marries the vintage feel of Atari's revolutionary PONG title with the Arcade classic of Air Hockey.

- Implemented a two player interface using Keyboard Controlled Event Listeners 'onClick'
- Utilized CSS Grid and Flexbox to design an aesthetically correct replica of a Hockey Rink for front end development
- Calculated collision detection and directional change using Javascript

[Connect Four, Charlie Murphy](#) - [GitHub](#) | [App](#) - HTML | CSS | Javascript

A humorous take on the classic game CONNECT FOUR where you're Charlie Murphy competing against Prince

- Created and conceptualized game concept using CSS Grid and Flexbox for Front End Development
- Designed a modern, comedic frontend theater for gameplay in CSS by using Gif as background image and background-size.
- Composed the winning logic parsing the FlexGrid as an array using Javascript for backend functionality

CAREER HIGHLIGHTS

Boogie Down Synch, Creative Specialist (Sync Licensing)

Bronx, NY, 05/2021 - 02/2023

- Catalog archivist and creative specialist, music supervisor for trailer music catalog

- Formulaically sorted through entire publisher catalog for keywords & search criteria for pitches & syncs
